Was ist Web 2.0?

- Coole Webseite
- Ein Vokal fehlt im Namen
- Runde Ecken
- Easy
- Registrieren in 3 Schritten

The screenshot shows the scanR website interface. At the top, there is a navigation bar with links for "My Scans", "Settings", "Activation code", and "Help". Below this, there are tabs for "Whiteboards", "Documents", and "Business Cards", along with a "Sign-up" button. The main content area features a large heading: "Turn your camera phone into a scanner, copier, and fax." followed by a sub-heading: "Just take a picture, send it to scanR, and get a clean, searchable file in your email, contact manager or fax." A three-step process is outlined: 1. Take a picture, 2. Send it to scanR, 3. Check your email. A prominent orange button says "Try It Now". Below this, a quote from Rate Needleman on The CNET Blog states: "I use my digital camera all the time to capture whiteboards. scanR processes these images for you and makes them highly useful." Three service categories are listed: "Whiteboards" (Scan whiteboards into clean legible PDF files), "Documents" (Scan documents into searchable PDF files or send via fax), and "Business Cards" (Scan business cards into your address book). Each category has a "More" link and a "View Examples" link.

Was ist Web 2.0?

Aktuelle Definition von Tim O'Reilly:

"Web 2.0 is the business revolution in the computer industry caused by the move to the **internet as platform**, and an attempt to understand the rules for success on that new platform. Chief among those rules is this: Build applications that harness **network effects to get better the more people use them.**"

Tim O'Reilly (2006-12-10). Web 2.0 Compact Definition: Trying Again

Tim Berners-Lee:

Web 1.0 was all about connecting people. It was an interactive space, and I think **Web 2.0 is of course a piece of jargon**, nobody even knows what it means. If Web 2.0 for you is blogs and wikis, then that is people to people. But that was what the Web was supposed to be all along.

■ Google Mail – Ein Mailclient im Netz

The screenshot shows a web browser window displaying the Google Mail interface. The browser's address bar shows a long alphanumeric string. The page title is "Google Mail - [tf-ont] NAO & NGM drafts". The user is logged in as "max.at.xam.de@gmail.com". The interface includes a search bar with the text "nepomuk", navigation links for "Compose Mail", "Inbox (28934)", "Starred", "Chats", "Sent Mail", "Drafts", "All Mail", "Spam (7177)", "Trash", and "Contacts". A "Quick Contacts" sidebar is visible on the left. The main content area shows an email from "Simon Scerri" to "tf-ont" dated "12:50 pm (3¼ hours ago)". The email text reads: "Hello TF-Ont, The draft documents for the annotation ontology (NAO) and graph metadata (NGM) have been updated. In particular the NGM draft has moved under the NAO folder: http://svn.nepomuk.semanticdesktop.org/repos/trunk/taskforce/TF-Ont/draft/NAO/NAO.html http://svn.nepomuk.semanticdesktop.org/repos/trunk/taskforce/TF-Ont/draft/NAO/NGM.html More feedback/criticism appreciated! Thanks, Simon Scerri". Below this email is a reply from "Sebastian Trüg" dated "3:07 pm (1 hour ago)" which says "Thanks a lot, Simon. Great work. I still have some questions: * I still do not understand how to actually use the status and the version. I asked you about it already. I do not see how I can update a graph with new or modified statements without losing the information when these new statements were created. Unless I put them in the old graph and a new one. * Would it make sense to introduce a very simplistic nao:Tag class that acts as a simple text/symbol tag? The advantage would be that simple tags could be defined, listed, and used like many applications already do. Otherwise listing tags would mean to search for all resources that are used with the hasTag property. It would however, not allow to create new tags that are not assigned to anything yet (which is the way many users do it today.)". The right sidebar contains "Sponsored Links" for "RacerPro for Semantic Web", "New Ontology Design Tool", "Language and Computing", and "Next Generation KM".

Unbloggable time

As you probably noticed that I don't blog much. It's not because I'm not allowed to work anymore (on maternity leave :), but because my brain is busy with all kinds of unbloggable baby-to-come things. I have a few drafted posts that I will try to finish and few that didn't get posted due to the technical issues, so those might appear...

I guess blogging will be very sporadic coming weeks - my Flickr stream and Skype tagline could be more up-to-date with what is happening :)

typo3 board 07 - podcast

Montag, 12. Februar 2007 19:53:00

Von Leo Sauer mann

back to work, back to the web, just sitting on my couch with Rinne, a typo 3 guy who was with the T3BOARD07 - a snowboarding week of [typo3](#) geek and geekines.

watch their amazing video of a week of snow and party...

Colorful and entertaining report from the #1 TYPO3 event of the year! T3BOARD07 was held in France, Les Deux Alpes, last week in January - the 6th time! 130 participants from 10 countries in Europe. You will see snow, people, girls, football, tour de chambres and what was on the agenda for the lucky ones. And some extra gags are thrown in.

Foreword by Grady Booch

Portland Pattern Repository

We're writing about computer programs in a new stylistic form called [pattern languages](#). The form has many internal references which map well to hypertext links. We've added links to published (or soon to be published) documents. Short summaries appear in the...

- [Pattern Language Catalog](#)

We've also created a space for exploring the not-quite-yet patterns we all carry around in our heads...

- [People, Projects & Patterns](#)

The Hillside Group's [Patterns Home Page](#) lists other pattern resources including papers, books, conferences.

New [survey results](#) are in. This form tallies survey responses as they are made. Have a look to see what people like about the repository. Then add your two-cents worth.

If you have questions or comments regarding this repository, please address them to ward@c2.com. Watch for improvements listed in [recent changes](#) and track the popular files on our [top-ten list](#). Thank you for visiting.

Design Patterns Web Page

SingletonPattern

Advice to visitors: Spam is not allowed on this site. Unwanted links are removed before indexing is allowed. If you are new here, please consider reading [GoodStyle](#) before contributing. If you just want to try out how Wiki works, please edit [WikiWikiSandbox](#) instead of existing pages or adding new ones. Thank you.

Type the code word here then press to finish editing. Read [MoreAboutCodes](#).

If a system only needs one instance of a class, and that instance needs to be accessible in many different parts of a system, you control both instantiation and access by making that class a singleton.

Often, a system only needs to create one instance of a class, and that instance will be accessed throughout the program. Examples would include objects needed for logging, communication, database access, etc. You could pass such an instance from method to method, or assign it to each object in the system. However, this adds a lot of unnecessary complexity.

Or, you could make that single instance the responsibility of the class, and then query the class for the instance.

```
'''Therefore,''' let the class create and manage the single instance of itself, the  
''Singleton.''' Wherever in the system you need access to this single instance, query  
the class.
```

Simply put,

I can not type tabs. Please [ConvertSpacesToTabs](#) for me when I save.

[GoodStyle](#) tips for editing.

Singleton Pattern

If a system only needs one instance of a class, and that instance needs to be accessible in many different parts of a system, you control both instantiation and access by making that class a singleton.

Often, a system only needs to create one instance of a class, and that instance will be accessed throughout the program. Examples would include objects needed for logging, communication, database access, etc. You could pass such an instance from method to method, or assign it to each object in the system. However, this adds a lot of unnecessary complexity.

Or, you could make that single instance the responsibility of the class, and then query the class for the instance.

Therefore, let the class create and manage the single instance of itself, the *Singletons*. Wherever in the system you need access to this single instance, query the class.

Simply put,

Ensure a class has only one instance, and provide a global point of access to it.

Resulting context

This unifies access (cf. [NarrowTheInterface](#)) to the singleton, leaving parts of the system uninterested in the singleton unaffected by it. Further, because access is controlled by a class, that class method can include additional logic needed to handle these queries.

Singletons are most appropriate for services that do not change their nature based on their invocation context. A singleton can be created at startup based on context or be reset for larger scale state transitions. A lot of things fall into this category: logging, communication, database access, etc are candidates. (Most things, of course, do not fall into this category.)

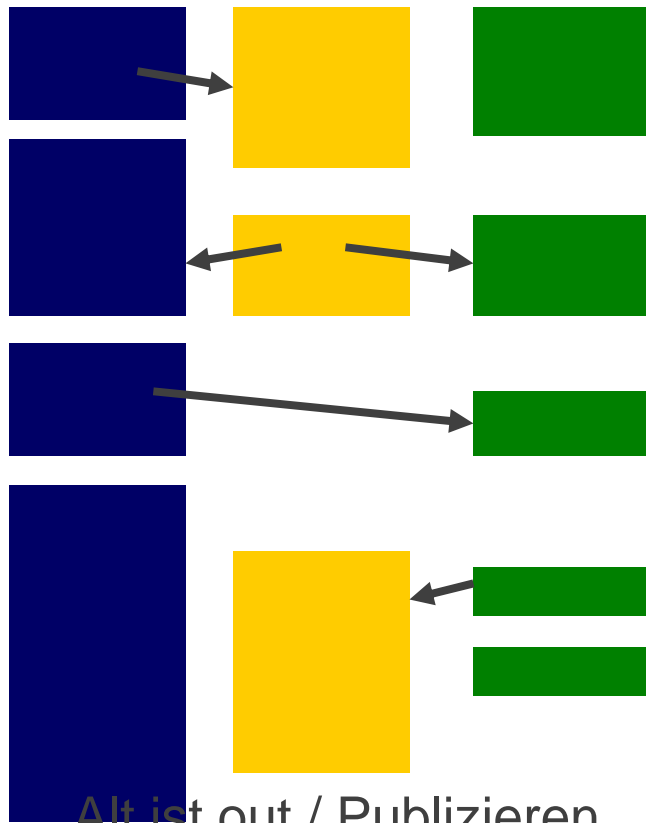

- Everyone can edit
 - Technology allows to edit
 - Syntax is easy to learn
- History of edits
 - Recent changes
 - Community building / Attribution
- Easy to revert
 - Important for fighting vandalism
 - No fear of breaking the system

Mash-Up: Zukunft

- 1. Yahoo Pipes
- 2. Semantic Web

Web 2.0 ist ...

- ... technisch: wenig neues
 - Web-Benutzungsschnittstellen werden flüssiger
 - Desktop verlagert sich ins Web (Software als Service)
 - Vom Portal zur Plattform
- ... sozial: stärkere Ausbildung virtueller Gemeinschaften
 - Kollektiv von Nutzern schafft einen Mehrwert (Netzwerk-Effekte)
 - Aufmerksamkeit wird monetarisiert
- ... kulturell: Identitätsstiftend „Ich bin ein Blogger!“
 - Diese Webseite ist im „Web 2.0-Design“
- ... letztlich: Vor allem **Benutzungsfreundlicher** ?
 - Ein Hype. Nach 2.0 kommt 3.0. Nach 3.0 kommt 4.0.
Das Netz entwickelt sich weiter.
